

**ABSTRACT OF THE DISCLOSURE****METHOD FOR PROVIDING A DESCRIPTION OF A USER'S CURRENT  
POSITION IN A WEB PAGE**

5

A method, program, and apparatus for providing a description of current position in an electronic document are provided. The invention first comprises parsing the electronic document into a parse tree. When the system  
10 receives a command from the user requesting current position in the electronic document, an algorithm performs a walk up the parse tree, from the current position to the root of the document. A position response, containing nodes in the walk up the parse tree,  
15 is constructed by the algorithm and reported to the user.
